

SQL Server® Health Check

DynamicQuest.com

When was the last time you assessed your SQL server? If it's been a while, you're probably getting substandard performance. Worse, it might have developed security vulnerabilities that leave you open to a breach—either from outside or from within your own organization.

Our SQL Server Health Check evaluates performance and identifies weaknesses. We provide a thorough report that flags problem areas and specifies actionable solutions. Our report is much more than a simple summary of common findings. It contains carefully compiled analysis and recommendations that can only come from an experienced specialist interpreting data.

Your applications must be quickly accessible at all times. If poor performance prevents your employees from serving customers promptly, your business could suffer.

AVAILABILITY

Your customers trust you to keep their information secure. A breach can cause irreparable damage to your company's reputation.

SECURITY

You need confidence that your databases will be up and running at all times, and that they're configured properly.

STABILITY

Backups are critical to protecting your data. Should a server go down, your ability to recover quickly is crucial.

BACKUP & RECOVERY

It's our job to spot approaching problems before they arrive. Our comprehensive report alerts you to as-yet-unnoticed issues that could cause trouble if not addressed. Our team goes over the report with you point by point, answering questions and ensuring you have a clear understanding of our assessment and our recommendations.

SQL Q&A

Clear answers to these questions can prevent problems down the road.

1. Are your Microsoft® SQL Servers® updated to the most recent version?
2. Are your servers running out of storage capacity?
3. Are there unidentified security vulnerabilities?
4. Are your servers configured properly and being maintained regularly?
5. Where are they being backed up? How often?
6. Are they performing at sufficient level?
7. If your server died today, would you be OK?

Our specialists know SQL. And they know business.

Our database specialists have the business background, project management experience and technology expertise to deliver recommendations attuned to your business goals. Our health check saves you time and money by ensuring that your servers are performing optimally and that your business data is secure.

Health Check Report

Your SQL Server Health Check Report is a unique, expert evaluation that includes:

- ⦿ Executive Summary
- ⦿ Hardware and Operating System Findings
- ⦿ Configuration Findings
- ⦿ System Database Analysis
- ⦿ User Database Analysis
- ⦿ Backup and Recovery Findings
- ⦿ Risk Analysis and Recommendations
- ⦿ Monthly Maintenance Recommendations

How we provide **BETTER ANALYSIS** at a **LOWER COST**

Dynamic Quest experts review your SQL Server environment with an impartial perspective that only an outside team can provide.

INDEPENDENT AND IMPARTIAL

Most companies don't have a dedicated database analyst (DBA). Our experts work on databases all the time. With our team doing what they do best, your team can focus on their own priorities.

EFFICIENT

We're established specialists in Microsoft SQL Server database management. Our knowledge allows us to perform the analysis effectively at less cost.

COST EFFECTIVE

We go beyond SQL

Dynamic Quest is an IT and cloud services provider serving customers across multiple industry verticals. We have gathered a team of specialists covering nearly every aspect of IT. Our experts assess your environment, identify potential problems, provide recommendations and get everything working optimally. Our advice and service is always strategically focused on furthering your business goals—including cost control, stability, process improvement and growth.
