

Peace of mind and simplicity come standard with our backup and recovery solutions

Backup Highlights	QFile	QSync BDR
File-level backup At pre- configured intervals, for servers and workstations	✓	✓
Image-level backups Bare-metal backups from servers, workstations or virtual machines. Enables on- site recovery to physical or virtual environments		✓
Image- level recovery from local backups Image-level backups automatically performed at pre- configured intervals, enabling extremely rapid recovery		✓
File-level recovery from cloud On-site recovery to physical environments	✓	✓
Image-level recovery from cloud On-site recovery to physical or virtual environments		✓
Multi-point backup storage Image-level backups encrypted, compressed and duplicated to both local server and cloud, minimizing risk and providing recovery flexibility		✓
Server continuity via redundant hardware QSync BDR's locally installed hardware provides near-immediate server continuity, allowing your operations to continue until your failed servers are replaced		✓

Data is the lifeblood of your business. Protecting it should be your first priority. Your business couldn't survive without its data. Unfortunately, there are countless ways to lose those most precious assets in the blink of an eye.

Dynamic Quest offers 2 levels of protection to keep your business ahead of unfortunate surprises, and able to keep running through any eventuality.

Choose the backup and recovery solution that best fits your business and budget. Our solutions range from simple and secure to comprehensive, enterprise-level tools that can run an emergency backup of your entire network. With one of our automated solutions in place, you'll have the peace of mind that comes with knowing your data will always be safe.

QFile:

Our most basic backup and restore plan allows for file-level syncing with our off-site cloud servers.

QSync Backup and Disaster Recovery (BDR):

Our most complete option includes everything that QSync BR has to offer but allows for server continuity if time is of the essence in a crisis. Our onsite BDR provides ready-to-run redundant continuity hardware that keeps you running until new hardware can be secured.

A simple, reliable (and low cost!) solution for protecting critical business data.

Affordable file-level backups:

QFile backup is a business-class cloud backup service that provides file-level backup for servers and workstations at a low cost.

Enjoy peace of mind:

QFile eliminates the stress of performing manual backups and the fear that records are incomplete or unsecure.

Incremental backups and flexible recovery:

QFile performs incremental backups, encryption, and compression on all file types, including open files. These incremental backups enable flexible and granular recovery, including current version restores, point-in-time restores, and restores to specific locations.

Automated and secure, saved in the cloud:

Automatic backups are validated and saved to secure cloud servers. In case of data loss or workstation failure, multiple recovery options are in place to make sure you get back up and running quickly.

Quick to install, easy to use:

Finally, QFile backup can be installed and configured in minutes to run invisibly and automatically, with instant alerting and email notifications in case there's a problem.

Key Features

- ⦿ Business-class cloud backup and recovery, providing unrivaled protection of business data
- ⦿ Backup of open file types and support for local backups, matching any business environment
- ⦿ Easy setup and management, reducing administrative burden
- ⦿ User-owned encryption keys and compliant data centers, exceeding industry standards

QFile makes file backup and retrieval easy and secure

QFile is the perfect combination of power, convenience and cost for small business owners. With simple, complete and worry-free backup from QFile, you can keep your business moving forward when disasters occur.
